| 1) The Concept

Modern health is noisy. Devices and dashboards proliferate while clarity declines. The Arc takes the opposite approach: one focus per month, three daily micro-actions, and periodic reflections. The aim is not perfection but rhythm—a stable pattern your biology can trust.

Each phase teaches why an action matters, not just what to do, so you can self-adjust when life changes. This is a prevention-first framework: small, repeated behaviours that reduce friction in sleep, glucose, inflammation, and stress signalling. The result is sustained energy, steadier mood, and quieter physiology—foundations of long healthspan.

| 2) Predisposition Map

Scores (0–100; higher = more attention pays off)

FAMILY/CARDIOVASCULAR RISK

75

Your family history shows moderate genetic predisposition to cardiovascular disease and diabetes.

LIFESTYLE LOAD (PERCEIVED STRESS)

60

Your lifestyle load indicates moderate stress levels with room for improvement in sleep, exercise, and stress management practices.

PHYSIOLOGICAL PATTERN (AUTONOMIC BALANCE)

45

Your physiological patterns suggest some autonomic dysfunction, likely related to stress and sleep quality.

BIOLOGICAL RISK (BEHAVIOURAL/ANTHROPOMETRIC)

25

Your biological markers show good metabolic health with low inflammation.

COGNITIVE RHYTHM (FOCUS & WELL-BEING)

55

Your cognitive health shows some fatigue-related concerns. Prioritize sleep quality and stress reduction techniques.

| 3) Precision Screening Plan
